DETAILED ACTION

EXAMINER'S AMENDMENT

1 An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kari P. Footland, Registration No. 55,187 on 4/25/2008.

The application has been amended as follows:

Claim 1, line 13: after "code added", replace the (.) with (;)

line 14: add the following limitations:

---wherein the error detection/correction system switches over error detection/correction codes to be used dependent upon on a phase of transmitting an address, a command, and data.---

Claim 13, line 11: after "code added", replace the (.) with (;)

line 12: add the following limitations:

---wherein the error detection/correction system switches over error detection/correction codes to be used dependent upon on a phase of transmitting an address, a command, and data.---

Claim 2: cancel claim 2.

Claim 7, line 2: change "claim 2" to ---claim 1---.

Allowable Subject Matter

2. After further search and thorough examination of the present application and in view of the prior art of record, claims 1, 2-9, 13 are found to be in condition for allowance.

Reason for Allowance

The following is an examiner's statement of reasons for allowance: The present invention relates to an error detection/correction system and a controller using this system in a bus that connects modules of the control system with each other.

To achieve this inventive goal, the independent claims identify the distinct features "a plurality of error detection/correction circuits corresponding to a respective one of the error detection/correction code generation circuits, wherein an error detection/correction code generation circuit and an error detection/correction circuit are switched over dependent upon a kind, a length, and a timing of the data to be transferred to detect and correct an error of the data having the error correction code added; wherein the error detection/correction system switches over error detection/correction codes to be used dependent upon on a phase of transmitting an address, a command, and data."

Cited reference, Zulian (U.S. Pat. No. 5,701,413) discloses a multi-processor system in which a plurality of processors have access to a plurality of shared memory modules. The second cited reference Byers (U.S. Pat. No. 5,535,405) discloses a microsequencer bus controller system.

However, the features disclosed in the instant application (No. 10/726,561) are neither anticipated nor rendered obvious by the prior art of record.

These limitations, in conjunction with all other limitations of the base claims were not shown by, would not have been obvious over, would not have been fairly suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
